

Weather Dashboard — 15 Screen States

Every state on its own phone frame. Story order: loading → Config A → Config B → kill-switch → debug panel
→ config viewer → edge cases. Pan and zoom freely.

01 App Loading / Splash

Config being fetched · RemoteConfigBloc loading

02 Config A · Compact

user_42 · UV + Hourly shown · Air / Wind / Alert gated off

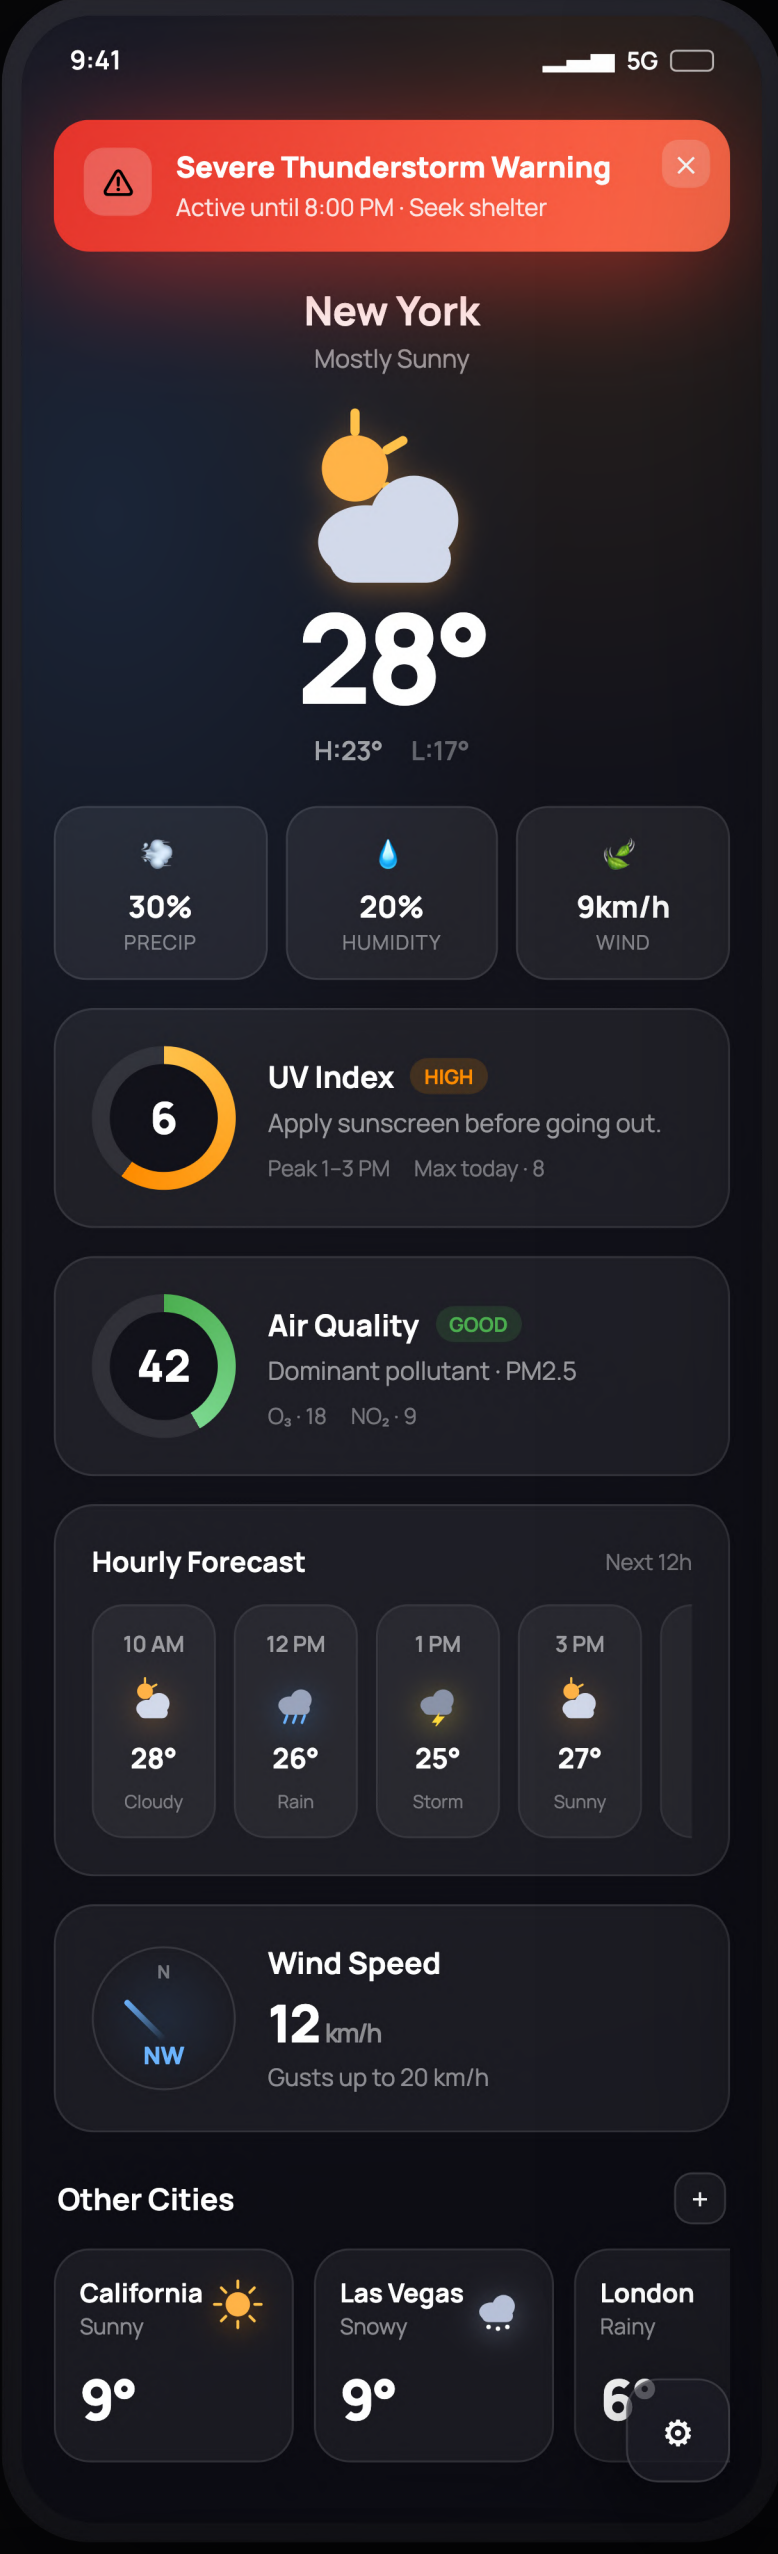

03 Config A · Different User

user_87 · UV + Air shown · Hourly now gated off

04 Config B · Detailed

user_42 · every flag ON · alert banner + 4 detailed cards

05 Config B · Wind Hidden

user_91 · outside 80% wind rollout · no Wind Speed card

06 Kill-Switch · Before

alert kill = false · banner active & dominant

07 Kill-Switch · After

alert kill = true · banner gone · content reflows up

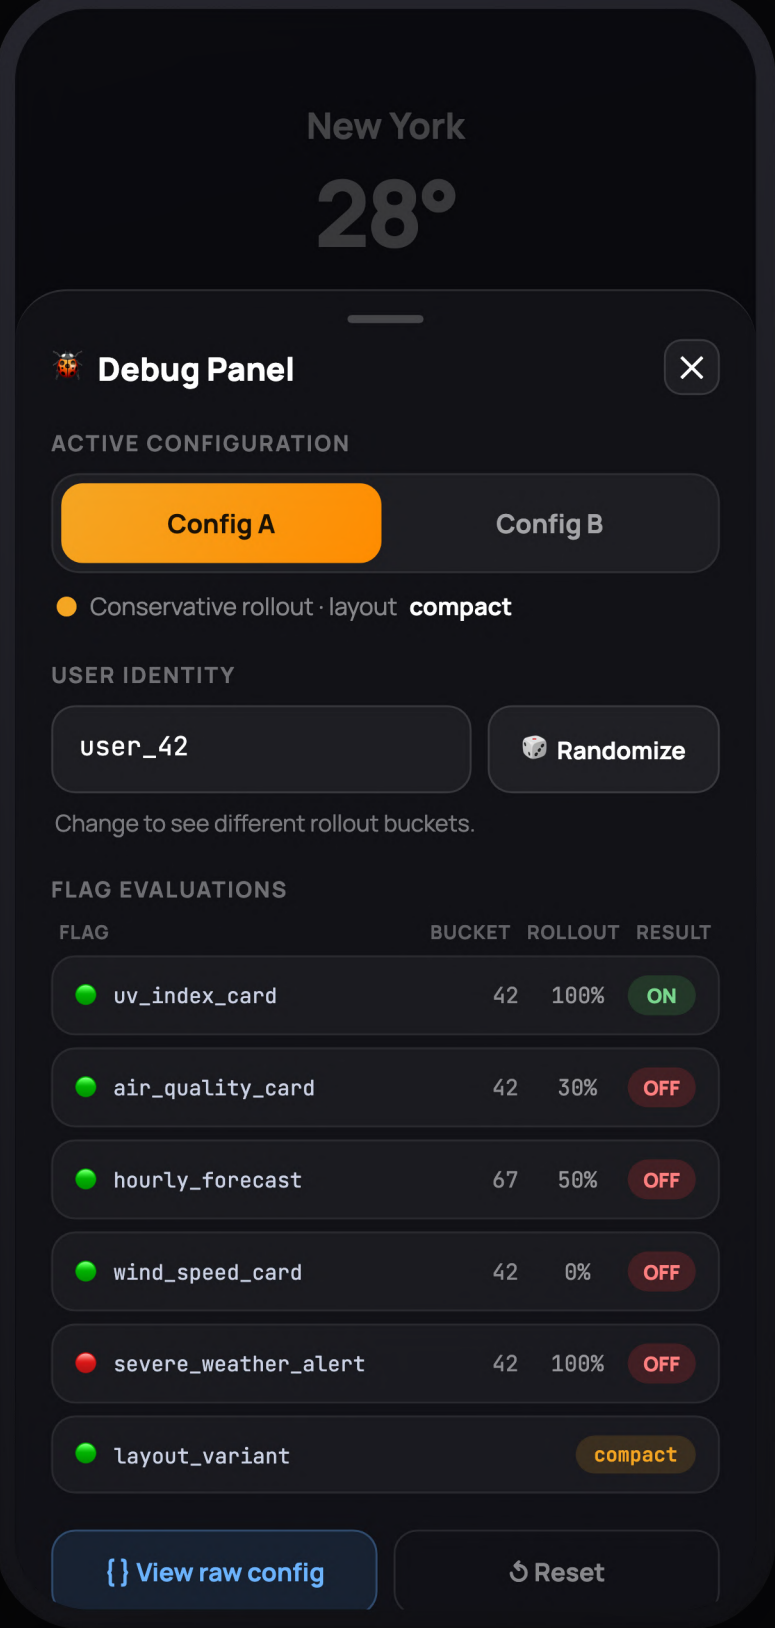

08 Debug FAB · Collapsed

glassmorphic gear FAB · glows to hint it's tappable

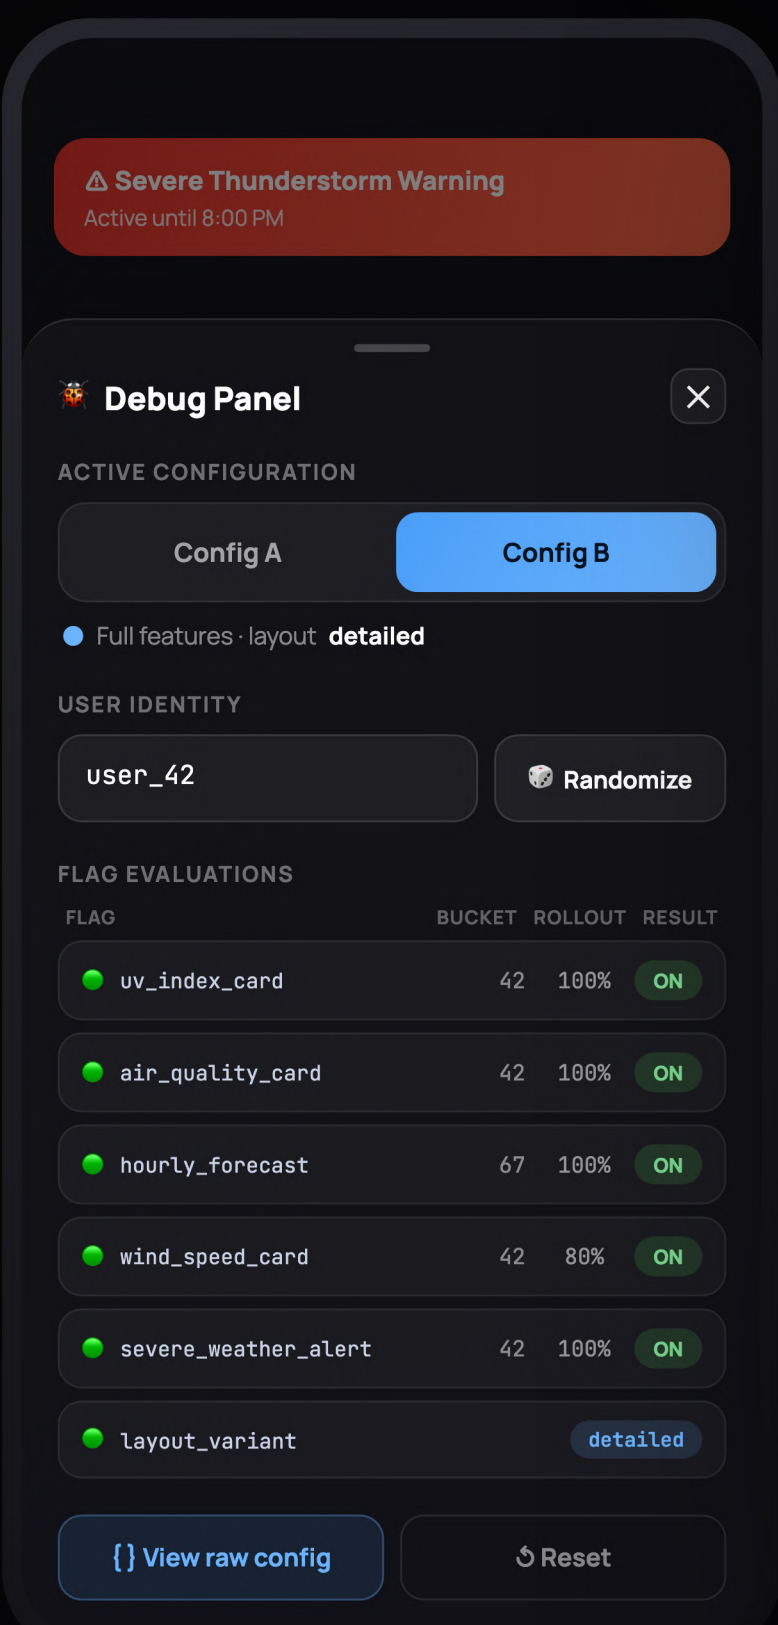

09 Debug Panel · Config A

bottom sheet · user_42 · live flag evaluation table

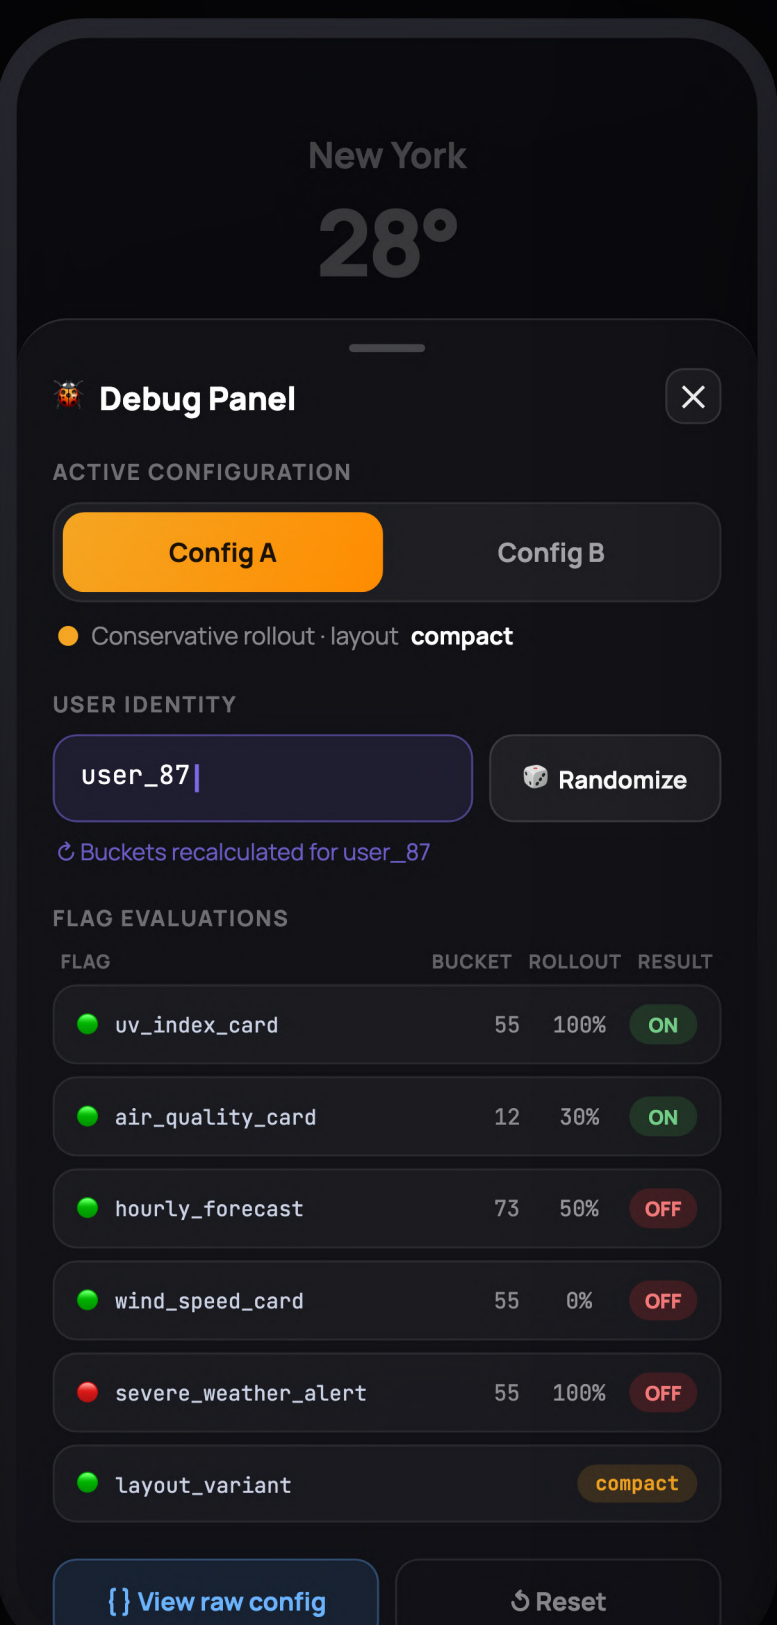

10 Debug Panel · Config B

toggled to B · every flag now ON · banner peeks behind

11 Debug Panel · User Changed

Config A · user_87 · buckets recalculated, Air flips ON

12 Config Viewer · A JSON

raw config object · syntax-highlighted · copy to clipboard

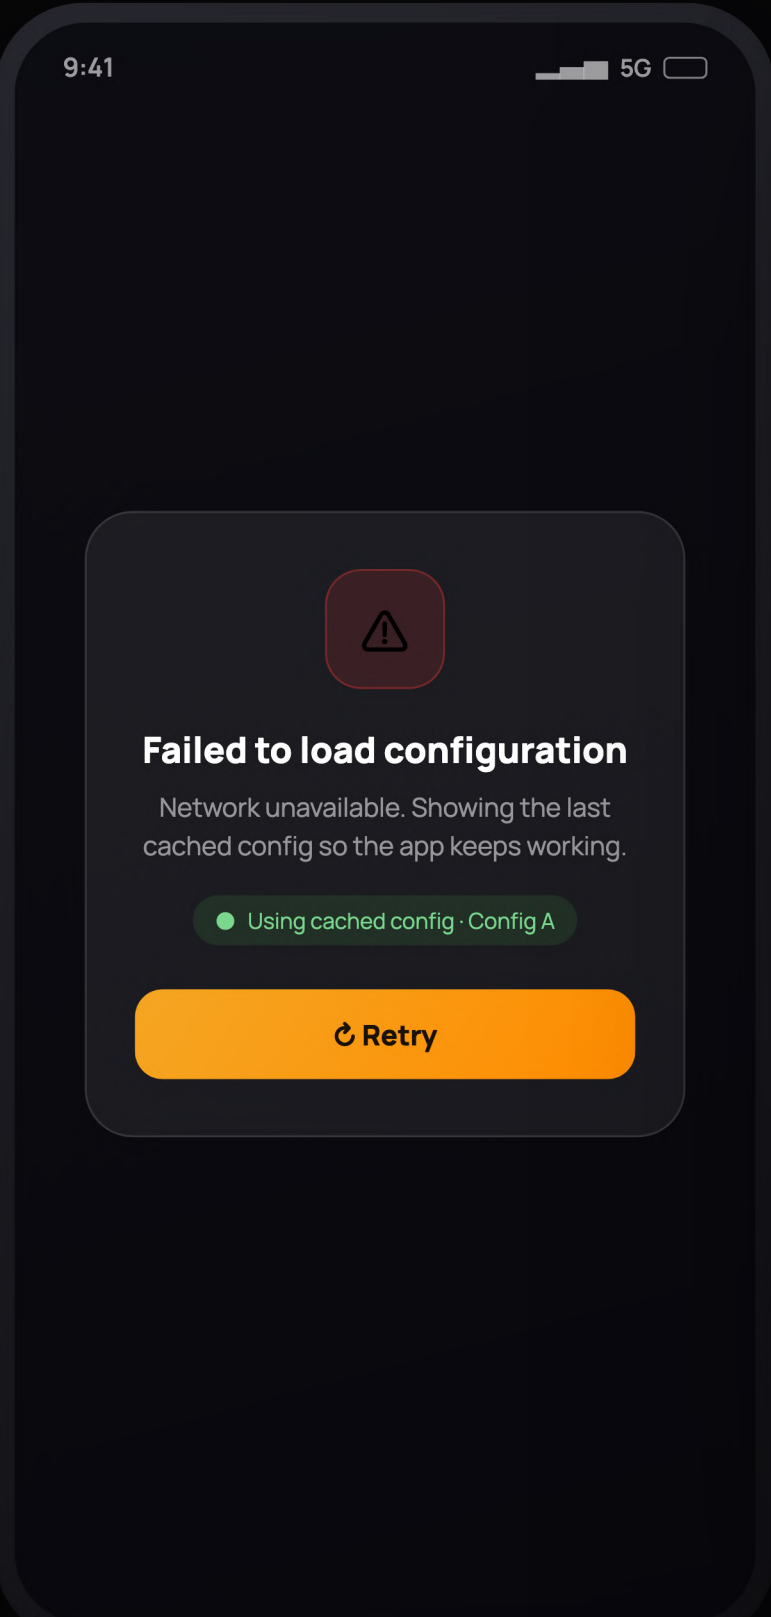

13 Config Viewer · B JSON

kill false · rollouts 100/80 · variant detailed — diffs at a glance

14 Error · Fetch Failed

graceful degradation · falls back to cached config

15 Shimmer · Loading Data

gating decides WHICH skeletons show · Config A → 2 cards
